^{1/} Based on the WHO Child Growth Standards, Methods and Development, 2006

^{2/} Age refers to the age of the child computed to the nearest month as of last birth date.

For example, a child born on 01 October 2004 and weighed on 21 August 2007 is 2 years, 10 months and 20 days.

Multiplying 2 years by 12 months and adding 10 months, the child will be 24 months plus 10 months or 34 months old.

Disregard the number of days in the computation of age in months.
